SIMPLE RULES/SUGGESTIONS:	SECTION	PAGE
Get the necessary equipment	Equipment	2
Attend all labs, avoid penalties	Attendance and absences	2
READ	Reading	3
	Directed Reading	TED*
	Schedule of Experiments	TED*
Participate in lab/lecture	Lab performance/participation	4
	Clickers in Micro lab	4, TED*
Maintain a good lab notebook	Notebook	5
	How to use your notebook	5
Turn in assignments on time	Homework and lab proposal	6
	Homework due dates/points	6
	Grading scheme	7
Stay on top of course information	Course Website/Ted	7
Be familiar with expected outcomes	Goals and Outcomes	TED*
Maintain integrity	University policy on integrity	8
	Integrity policy on Ted	TED*

***On Ted, in folder labeled “Useful Information”**

Lecture: Tuesday/Thursday 8:00 – 9:20 in 122 PCYNH (Pepper Canyon Hall; near the Gilman Parking Structure).

Labs: York 2310 and 2332

Tuesday/Thursday: 9:30 am – 1:30 pm

Wednesday/Friday: 9 am – 1 pm

Office hours: Mondays 10:00 am-11:00 am. Location: 4070C York Hall or 2300 York Hall – to be confirmed.

Course Structure:

This course will introduce you to the fundamentals of microbiology and allow you to explore the many ways in which microbes affect and are used in our lives. We begin the course with a foundation in basic techniques such as sterile techniques, microscopy, methods of quantitating microbes, and preparing and examining stained slides. The remaining duration of the course will comprise two main units: a comprehensive look at bacterial physiology and the use of microbes in various aspects of our lives. Each of these units comprises several multi-day experiments and there will be considerable overlap in the execution, methodology, and analysis of data from each of these units. Throughout the course, you will also receive training in accurate data entry and analysis, scientific reasoning, and in clear and concise scientific writing.

Equipment:

For this lab you will need to purchase:

- A lab notebook (bound notebook, regular or spiral bound). Carbon notebook not necessary. Loose-leaf binders not allowed.
- A lab coat
- Eye protection (you may wear either safety glasses or goggles, but standard prescription eye glasses are not sufficient).
- A Sharpie permanent marker pen, preferably fine point (not extra fine or regular)

Attendance and Absences:

1. Your attendance is required at EVERY lab and through the entire lab period, until all the experimental work for the day is completed.
2. Absences will NOT be treated lightly. The labs are set up for groups of two or more and your absence will place an unnecessary burden on your partner. There are no make up labs and you will not be allowed in the lab on non-lab days or in the other Micro lab sections, although you may be asked to make up the work from the day you missed.
3. Documentation will be required for all unavoidable absences.

4. If you are likely to have interviews for graduate school, etc., please schedule them on non-lab days.
5. All absences without prior notification/permission and the appropriate paperwork will be considered unauthorized.
6. **50-point penalty** for the first unauthorized, unexplained absence from the lab. If there is a second such absence, you will be asked to drop the course or will be given an F.
7. If you are ill on a lab day or have an emergency, e-mail or call (instructor or lab partner) before the start of the lab. If you are ill enough to miss lab you must go to the student health center and provide documentation of your illness.
8. You need to inform both the TA and the instructor of any proposed absence. Only the instructor can decide whether or not the reason for an absence is sufficient to call it an authorized absence.

Reading for the lab

Reading ahead of the course:

If you wish to read ahead, your best bet is to brush up on any information on microbes, cell structure, and basic microbial physiology (glycolysis, TCA cycle, electron transport chain, central dogma, etc). All information pertinent to topics covered in class is in the manual and will be discussed in lecture. By the first lecture, I strongly recommend that you have at least some familiarity with the following material (that we anticipate you SHOULD know from your prerequisite courses):

- Definition of microbes and an understanding of the different groups of microbes (e.g. bacteria, fungi). You are not required to memorize all the names – you should, however, have at least a basic idea as to the types of organism included in each category.
- Understanding of the scientific method – brush up on this concept – there are several online sites, including Wikipedia, that do a good job of explaining dependent, independent, and controlled variables as well as the difference between a control experiment and a regular experiment.
- Understand how to make figures from Excel spreadsheets – how to calculate simpler values such as standard deviation, averages, etc and how to plot them as line/plot graphs with error bars.

Reading during the course:

- Read the chapters before you come to lecture. After week 1, I will post guidelines to reading the chapters in the folder labeled “Directed Reading” on TED
- When you are in the classroom, I will go over the basics as required, any fundamental concepts that you do find or might find difficult, that are important, or that are particularly exciting or newsworthy.
- Then you will go to lab and actually see all those tests and concepts in action.

- Then go back and quickly reread the material in light of the lecture and lab work and you will find that it becomes very clear since you are already familiar with most of it.

As often as possible, I will give you questions/problems to think about that should apply the concepts you learned in class. Thinking about and attempting to answer these questions and participating in any classroom/lab discussion is the best practice you can have for midterms, lab reports, and practicing science in general.

Lab Performance and Participation

In addition to quizzes, midterms, lab reports and homework assignments, student evaluations will be based on the following criteria:

1. Lab techniques will be evaluated in class
2. Lab workshop participation

Subjective student evaluations will be based on the following criteria:

1. Pre-lab preparation
2. Careful management of lab procedures (e.g., sterile technique, proper waste disposal, experimental procedures, etc.)
3. Ability to adapt to unforeseen procedural changes
4. Caliber of thinking before asking questions
5. Scientific approach (e.g., proper use of notebooks, controls, experimental design)
6. Accuracy
7. Independence
8. Safety consciousness
9. General neatness in lab

Please note: **You will be expected to get into the habit of methodical, well-planned and organized work by the mid-term. This will help you with the experiments in the second half of the course.**

CLICKERS in Micro Lab

This lab will introduce you to new material and concepts. To increase the depth of your understanding and to give you practice in applying these concepts, we will discuss these concepts from different perspectives in class. Over the last few

years, student feedback has shown that class participation has a very positive impact on performance in lab reports and midterms.

We will be using Clickers in class as part of the learning process and to help students stay on top of the concepts and their applications. Participation in the lecture discussion is worth 5% of your grade and requires that you click in at least 75% of the time in each lecture for at least 75% of the lectures. i>Clickers are available for purchase at the UCSD bookstore. Once you have purchased your Clicker, you can register it on Ted. A separate explanation of our Clicker policy is on Ted.

Notebook:

A spiral bound or composition notebook is OK. All notebooks should have a table of contents (handwritten OK) so on the first lab day leave several blank pages at the beginning of your notebook. Number your pages. Entries should be made in chronological order and EVERY day. Each day's entries on each experiment should begin with a brief (1 – 2 sentences) summary of work done on the same experiment the previous day.

How to use your notebook

Table of contents – update everyday – leave at least 4-5 pages for updating

Start a new page each day for each new experiment:

- Purpose of experiment

- Procedure

 - Outline or page from which protocol was taken

 - Note any changes

 - Note who did which part of the procedure – who inoculated controls, etc

 - Note which organisms you used – name and species of the controls, etc

 - Errors

- Observations

 - Write – in detail

 - Draw – enlarged, labeled, and including as much detail as possible

 - Questions and connections

- Conclusion or summary

 - Answer any questions in the manual or that were raised in class.

 - Number your pages

You may leave space to complete an experiment. When the experiment is complete and all observations have been made, cross off any blank pages or parts of pages following the written portion.

Homework and Lab report Deadlines and Submission:

1. A hard copy of each homework is due in the first 5 minutes of the lab period of the day on which your report is due. **All homework assignments submitted more than 10 minutes after start of lab are automatically late and lose 10% of the points. Any homework submitted the next calendar day would lose 50% of the points. No homework will be accepted after the second calendar day.**
2. There is only one lab proposal and it is due the Mon/Tues of finals week. Any lab proposal turned in one day late will lose 50% of the points. Any lab proposal turned in more than one day late will not be graded.
3. In addition to the hard copy of the assignments/report, you are required to submit an electronic copy to Turnitin.com. A link to the e-submission website will be provided on Ted. Failure to submit on Turnitin.com will result in 0 (zero points) recorded for that report. Check the deadline of the Turnitin.com submission and make sure you adhere to it. Students agree that by taking this course all required papers would be subject to review for textual similarity by Turnitin.com for the detection of plagiarism. All submitted papers will be included as source documents in the Turnitin.com reference database solely for the purpose of detecting plagiarism of such papers. Use of the Turnitin.com service is subject to the terms of use agreement posted on the Turnitin.com site. Some homework assignments also require Turnitin.com assignments
4. Additional points may be taken for late electronic submissions.

HW#	Description	Due date	Points
1	Library tutorial	Tues/Wed Oct 7/8	30
2	Scientific Method	Tues/Wed Oct 14/15	30
3	Growth curve	Tues/Wed Oct 28/29	15
4	Dilution problems	Tues/Wed Nov 4/5	20
5	Unknown analysis	Tues/Wed Nov 25/26	85
Total			180

Other important dates:

MT1 (in lecture): Thurs Oct 23rd

MT2 (in lecture and/or lab): Tue Nov 18th and Wed Nov 19th

MT3 (in lab): Thurs/Fri Dec 11th/ 12th

End of quarter concept analysis paper (HW6): Mon/Tues Dec 15th/16th

Grading Scheme

Evaluation criterion	Points	% of total
Competency	57	7.1
Lab notebook	36	4.5
Clicker	42	5.3
Homework	180	22.5
Quizzes	90	11.3
Midterms	335	41.9
End of quarter concept analysis paper (HW6)	60	11.3
Total Possible	800	

Most Likely Grade Distribution

A = 90% - 100%

B = 80% - 89.9%

C = 70% - 79.9%

D = 60% - 69.9%

F = below 60%

Regrade Requests:

All regrade requests should be submitted in writing within one week of receiving the graded material.

Course Website/Ted

This course is on Ted (<https://ted.ucsd.edu>) and should automatically appear on your Ted account as soon as you register for the class. We will use Ted to post information on experiments, exams, schedules, readings and practice material, experimental data, report guidelines, etc. We strongly encourage you to use the Discussion board to post questions or answers to questions and to use it as a forum for exploring the material. The TAs and I will routinely check this website and answer any questions but feel free to respond as well. This website will also be used to post any announcements that pertain to the entire class. Please check the site regularly and update yourself on the information provided.

University Policy on Integrity of Scholarship

The principle of honesty must be upheld if the integrity of scholarship is to be maintained by an academic community. The University expects that both faculty and students will honor his principle and in so doing protect the validity of University grading. This means that all academic work will be done by the student to whom it is assigned, without unauthorized aid of any kind. Instructors, for their part, will exercise care in planning and supervising academic work, so that honest effort will be encouraged.

Student Responsibility:

Students are expected to complete the course in compliance with the instructor's standards. No student shall engage in any activity that involves attempting to receive a grade by means other than honest effort; for example:

- No student shall knowingly procure, provide, or accept any unauthorized material that contains questions or answers to any examination or assignment to be given at a subsequent time.
- No student shall complete, in part or in total, any examination, or assignment for another person.
- No student shall knowingly allow any examination or assignment to be completed, in part or in total, for himself or herself by another person.
- No student shall plagiarize or copy the work of another person and submit it as his or her own work.
- **If any work is plagiarized from that of another student, both students will be reported to the Office of Academic Integrity, even if one of the students has graduated already. Remember that most graduate schools check the undergraduate records for any indications of dishonesty before awarding a degree.**
- No student shall alter graded class assignments or examinations and then resubmit them for regrading.
- No student shall submit substantially the same material in more than one course without prior authorization.
