

Neuroanatomy BIPN 160 & BGGN254, Winter 2020

Instructor: Cory Root, Ph.D.

Email: cmroot@ucsd.edu

Phone: 858-246-2241

Office Location: 3122A Pacific Hall

Office Hours: Wed 2-3pm & Fri 2-3pm

Instructional Assistants (IA):

Cheyenne Mercer, cnmercerc@ucsd.edu

Tianhao Qiu, t6qiu@ucsd.edu

Kelsey Swink, kswink@ucsd.edu

Class Meeting Days: T & Th

Class Meeting Hours: 3:30-4:50pm

Class Location: TATA Hall, room 3201

Study sections: Tuesdays: 6-6:50pm, 7-7:50pm, 8-8:50 pm.

Wednesdays: 6-6:50pm, 7-7:50pm, 8-8:50 pm.

All sections are in Center Hall 203.

Electronic communication:

Logistical emails can be sent to Dr. Root, but do not email questions about course content – those emails will be ignored. Instead, please ask questions during office hours, study sessions or email to the IAs. Please try to limit email questions because they can easily become an endless back and forth. Lecture slides will be available on Canvas before lectures and the class is podcasted.

Course goals:

The goal of the course is to give students a fundamental understanding of the anatomy of the human brain and peripheral nervous system as it relates to neural circuits, behavior, perception and cognition. We will also examine research from other animals. The course will include historical approaches and findings as well as modern techniques and questions. Students will be able to anatomically identify key areas in human brain involved in specific functions, and the course will explore the evidence that implies the function of key brain areas.

Learning objectives:

1. Identify anatomy and recall function of key brain areas and peripheral nerves.
2. Identify key experiments that allow us to assign functions to brain areas.
3. Describe and critique primary literature, identifying key experiments.
4. Implement techniques and tools to dissect neuroanatomy.
5. Construct knowledge from evidence

Learning Materials

A textbook is not required or recommended. There will be reading posted on Canvas that are taken for a few sources, including:

- 1) The Human Brain: An introduction to its functional anatomy, by Nolte.
- 2) The Brain: An introduction to functional Neuroanatomy, by Watson, Kirkcaldie and Paxinos.

Course scope and outline:

- 1/7 Introduction, Neurons and Glia, basic anatomy
- 1/9 Techniques to study neuroanatomy and function

- 1/14 Development of the spinal cord and brain
- 1/16 Spinal cord and periphery

- 1/21 Cranial nerves
- 1/23 Brainstem, Thalamus

- 1/28 **Exam 1**
- 1/30 Sensory cortex, auditory system

- 1/31 *Deadline to drop class without a W*

- 2/4 Visual system
- 2/6 Chemosensory systems

- 2/11 **No class**, Dr. Root gone for a conference
- 2/13 Hedonics: Ventral striatum, amygdala, and others:

- 2/18 Hypothalamus: Homeostasis and drives
- 2/20 Brain areas for sleep and arousal

- 2/25 **Exam 2**
- 2/27 Movement control: basal ganglion, and motor cortex

- 3/3 Cerebellum
- 3/5 Hippocampus: Learning and memory

- 3/10 Frontal cortices and higher order functions
- 3/12 Ventricles and Blood supply

- 3/14-3/21 Finals week. Time and location TBD.

Basis for Final Grade There will be two exams during normal class time worth 100 points each and one comprehensive final exam worth 150 points, for total of 350 points. Exams will be based off of lecture material and will contain multiple choice and short answer questions. Attendance at study sections (missing no more than one) will earn extra credit, which will result in a 1/3 letter grade bump (e.g., B+ to A-, or A- to A). The grading scale below will be used, however, grades may be curved to raise the average grade if necessary.

Grading Scale.

90 – 100%	A
80 – 89%	B
70 – 79%	C
60 – 69%	D
0 – 59%	F

Plus and minus signs will be added for grades that are 3 percentage points of the nearest cutoff. The grade of A+ will be reserved for the top ~5% of students

Students enrolled in BGGN254 will have an additional take home exam for each of the two midterms. The take home exams will be short essay format and you are welcome to use your notes. Each one will be worth 50 points. Therefore, you will have a total of 450, rather than 350, points for the course.

Study sections: Sections are voluntary and begin the second week. You are free to attend any section and go between them as needed. Lecture material will be reviewed, questions answered, and problem sets discussed. Extra credit will be given for good attendance.

Missed exams: Do not miss exams. You are expected to take the exams when they are scheduled during normal class time. Make-up exams will only be arranged in extreme situations.

Grading objections and regrades: If you have an objection to a **particular exam question**, you have 24 hours from the end of the exam to raise your concerns. Objections to exam questions must be made in person with a prepared, written argument of why that question was unfair. A decision will then be made whether to exclude that question for the entire class.

If you have objections to the grading of a question on **your** exam, you can e-mail a written argument to Dr. Root. **The e-mail has to be received within a week after you receive the exam. You then have to meet with Dr. Root during his next office hours or after class.** Note that a regrade may result in a gain or loss of points; regrading may not be limited to the question you petitioned about. Graded exams will be randomly copied before being returned. If you are caught altering your answer to an exam question for a regrade, you will be given a zero on the entire exam and reported for academic dishonesty.

Violations of Academic Integrity: Violations include, but are not limited to:

- Cheating: Intentionally using or attempting to use unauthorized materials, information, notes, study aids, or other devices in any academic exercise.
- Fabrication and Falsification: Intentional and unauthorized alteration or invention of any information or citation in an academic exercise. Falsification is a matter of inventing or counterfeiting information for use in any academic exercise.
- Plagiarism: Intentionally or knowingly presenting the work of another as one's own (i.e., without proper acknowledgment of the source).
- Abuse of Academic Materials: Intentionally or knowingly destroying, stealing, or making inaccessible library or other academic resource materials.
- Complicity in Academic Dishonesty: Intentionally or knowingly helping or attempting to help another to commit an act of academic dishonesty.
