1 Course Objectives

This course examines theoretical foundations of international trade and its empirical analysis. On the theory side, the course considers the determinants of the trade pattern in goods and services, explanations of export-market participation and multinational activity at the firm level, as well as the interrelation of international trade with factor-market outcomes, income distribution and commercial policy. The empirical parts of the course present tests of theories of international trade and international capital movements, and the analysis of their consequences for economic outcomes.

2 Prerequisites

Instructor's consent.

3 Readings

Textbooks: Feenstra (2004); Eaton and Kortum (2010);
partly Bhagwati, Panagariya, and Srinivasan (1998)

Readings: See Class schedule and References.

The Eaton and Kortum textbook draft and readings are available through the class web page (see above). For each lecture, there is a main reading and there are additional readings. The main reading is an original paper or book chapter.

Lecture slides will be available for download from the class web page before each class.

4 Paper reports

There are typically two lectures per week, and each lecture has one designated *Main Reading* on this syllabus.

You are asked to send me *one* paper report by e-mail per week, either on the main reading of the Tuesday lecture or on the main reading of the Thursday lecture. Please paste your report into the *body of the e-mail*. No report is due for Lecture 1. Starting with Lecture 2 on September 27, there are two lectures per week through November 17; one report is due for each of these eight weeks.

Given Thanksgiving holiday on November 24, the paper due in the ninth week is either one of the two alternative main readings for Lecture 18 on November 22. On two occasions, the main reading consists of three shorter papers and is cumulative.

Your report should be no longer than two (2) paragraphs and provide a summary of the paper's main insights and lessons. For theoretical papers, and the occasional historic conceptual paper, the summary should describe the main hypothesis and building blocks of the model, recount the main steps of the reasoning in the derivation, and assess the novelty and generality of the model. For empirical papers, the summary should describe the main features of the data source, explain the empirical procedure and identification strategy, and assess the robustness and generality of the results. For each paper, the summary concludes with a brief assessment of the role and relevance of the paper in the literature.

The paper report e-mail is due *before* the respective class, at 10am of the day of class. In particular, if a student chooses to review the main reading of the Tuesday lecture, then the report is due at 10am before the class on Tuesday.

5 Problem sets

Three problem sets will be distributed throughout the quarter. Problem set 1 will cover Industry-level Trade Theory, problem set 2 Firm-level Trade Theory and problem set 3 Global Production. The problem sets will ask you to derive main aspects of models covered in class, or related extensions. Each problem set is given out at the beginning of the according topic block (Sep 29/Oct 18/Nov 8) and due upon conclusion of the according topic block (Oct 13/Nov 3/Dec 1). Also see the Class Schedule for dates.

6 Oral presentation

The last week of class will be devoted to student presentations. In groups of two, students will choose a recent research paper at the frontier of research in international trade. For this purpose, you will propose a paper of your choice by Monday, November 21 at 5pm. In some cases, I may ask you to select another paper by Wednesday, November 23. The paper presentation should explain the paper's main insights in a style similar to a seminar. Ideally, students will conclude with ideas for own follow-up research. A presentation will be 40 minutes long and should be based on slides as if you were presenting your own work.

7 Assessment

There are four components of assessment: nine paper reports (out of 18 main papers), three problem sets, the oral presentation, and class participation. Class participation will count for 25 percent of the final letter grade; the paper reports, the problem sets, and the oral presentation also for 25 percent each.
