

Economics 125 – Demographic Analysis and Forecasting, Spring 2014

Location/Time	Pepper Canyon Hall; Room 146; T/TH 2:00 pm – 3:20 pm
Instructor	Jeff Tayman Email: jtayman@ucsd.edu
Office Location/Hours	Economics Annex #103; T/TH 12:30 pm – 1:45 pm Map of office location at the end of the syllabus
Class Web Site	ted.ucsd.edu
Teaching Assistant	Michael Wither; Sequoyah Hall #228; T/TH 10:00 am – 11:00 am mwither@ucsd.edu

Course Objectives

This course is designed to teach you the foundations of demographic analysis and forecasting. You will learn: (1) the terminology, methods, and practical guidance needed to create, evaluate, interpret, and use forecasts; (2) fundamental demographic concepts including population size, composition, and change; (3) the measurement, and interpretation of trends and patterns in fertility, mortality, and migration; (4) key relationships between economic and demographic process; and (5) the implications of demographic changes for the social security system.

Required Readings

1. Stanley K. Smith, Jeff Tayman, & David A. Swanson (2013). *A Practitioner's Guide to State and Local Population Projections*. Dordrecht, Springer (available in hardcover or eBook). The eBook is free for students to access as long as you use a network with a UCSD IP address (computer on campus, UCSD-PROTECTED wireless, VPN or proxy from off-campus). Each chapter is a pdf, so you can download and store it on whatever device, etc.
2. Articles on the Internet and the course website (See page 6 of syllabus).

Academic Integrity

Students found to have violated the Policy on Integrity of Scholarship will face administrative sanctions imposed by their college Dean of Student Affairs and academic sanctions imposed by me. Administrative sanctions can range from disciplinary probation to suspension and dismissal from the university; those are not at my discretion. Academic sanctions can range from 0 points on an assignment/test to an F in the class.

If you have any questions about academic integrity policy, call (858)-822-2163 or visit the Website (http://www.ucsd.edu/current-students/_organizations/academic-integrity-office/).

Course Assessment

Problem Sets— There are 5 problem sets. All assignments should be done with an electronic spreadsheet. (Microsoft Excel is available in the computer lab). Inputs to the assignments are on the class Website in the Folder labeled **Assignment/Inputs**. The URL <http://www.usd.edu/trio/tut/excel/index.html> is a link to an Excel tutorial.

Research Paper— A research paper is required (Details on pages 7-8 of the syllabus).

Exams— There is one mid-term exam and a final exam. The final exam is not cumulative. If you miss the mid-term because of a compelling and fully documented medical excuse or family emergency, your final exam will count for 47% of your grade instead of 33%. Missing the midterm for any other reason will result in zero points. There will be no alternate date/time for the final exam. A make-up final will be given in case of a fully documented medical excuse or family emergency.

Pop Quizzes— There are four pop quizzes given randomly, with no make-up provision.

Grading— You can earn a maximum of 325 points as follows: Assignments (85 points, 26%), first exam (50 points, 15%), final exam (100 points, 31%), pop quizzes (20 points, 6%), and research paper (70 points, 22%). **Any disputes about points earned must be resolved within one week after the assignment, test, or paper has been returned.**

You will receive no lower than: an (A-) with 293 points; a (B-) with 260 points; a (C-) with 228 points; and a (D) with 195 points. Depending on the distribution of the total points, the above breakpoints may be lowered.

Assessment Expectations

Assignments are due at the start of class; **assignments submitted later than 15 minutes after class starts or by email will receive a score of zero.**

You have two choices for doing the problem sets and research paper: 1) do them independently without assistance; or 2) do them as a group no larger than **6** people. Each member of the group will receive the same score and all names of the group must be typed on the submission when it is turned in. Group members with hand written names will receive a score of zero.

It is expected that the problem sets/research paper be completed on your own or as a group and in your own or the group's computations, graphs, tables, and words. You must not use the answers or spreadsheets developed by another person/group, including assignments from previous Econ 125 classes; or copy the work completed by others, including the Economics Tutor; or write the research paper with another person unless he/she is part of your group.

Any individual or group assignment that shares too many similarities with the assignment submitted by another or assignments from past Econ 125 classes will be further investigated to determine if cheating occurred. All suspected violations of academic integrity will be reported to the Academic Integrity Office according to university policy. If you do not understand these expectations please see me by the end of the second week of classes.

Course Schedule

Date	Topics	Readings
Apr. 1	Overview and Introduction	Chapter 1
Apr. 3	Fundamentals of Population Analysis	Chapter 2
Apr. 8	Mortality	Chapter 4; Population Reference Bureau (2006)
Apr. 10	Fertility	Chapter 5 Blake (1968); Easterlin (1978); Lutz (2007)
Apr. 15	Finish Fertility; Begin Migration	Chapter 6
Apr. 17	Migration	Assignment 1 due
Apr. 22	Finish Migration & Exam Review	
Apr. 24	Exam	
Apr. 29	Demographic Change and Social Security	Research Paper Readings
May 1	Cohort-Component Method	Chapters 3 and 7; Isserman (1993)
May 6	Cohort-Component Method	
May 8	Trend Extrapolation	Chapter 8 Assignment 2 due
May 13	Trend Extrapolation	
May 15	Economic-Demographic Models	Chapter 9; Hunt (1993) Assignment 3 due
May 20	Economic-Demographic Models	Paper Due
May 22	Special Adjustments	Chapter 11, pp. 241-258
May 27	Finish Special Adjustment; Begin Forecast Error	Assignment 4 due Chapter 13; Swanson and Tayman (1995)
May 29	Forecast Errors	
June 3	Finish Forecast Error; Begin Evaluating Projections	Assignment 5 due Chapter 12
June 5	Finish Evaluating Projections; Final Exam Review	
June 10	Final Exam	

Problem Sets

Assignment 1 (10 pts.)

1. Compute the doubling time using the exact method and approximation rule for selected counties in North Carolina using the 2000-2010 base period. (2 pts.)
2. Compute the projected 2040 TFR for California using the synthetic method based on U.S. forecasts. (1 pt.)
3. Compute the projected 2040 TFR for California using the targeting method for two alternatives:
 - a. Assume a 75% convergence by the year 2050 (1 pt.)
 - b. Assume a 50% convergence by the year 2060 (1 pt.)
4. Interpret the exact formula for doubling time for Jones and Edgecombe counties. (2 pts.)
5. Explain why the synthetic and targeting methods yield different TFR projections in 2040 for California. (3 pts.)

Assignment 2 (25 pts.)

1. Compute the 2005-2010 net migration rates by 5-yr age groups for Texas females. (5 pts.)
2. Using the net migration rates from Question 2, compute the 2015 projected population for Texas females using a net migration cohort-component model. (8 pts.)
3. Compute the components of the Texas female population change from 2010 to 2015. (2 pts.)
4. For Texas females, calculate age-specific cohort change ratios (CCR) between 2005 and 2010 and child woman ratio (CWR) for ages 0-4 in 2010. (2 pts.)
5. Create a 2015 population projection by age for Texas females using the Hamilton-Perry (HP) method. (3 pts.)
6. What at-risk population did you use to compute the net migration rates; why did you choose it? (2 pts.)
7. What is the difference in the 2015 total female population between the HP and CCM methods? What might explain difference between these the two projection methods? (1 pt.)
8. Explain results from Question 4. What is the major factor contributing to the growth in the female population of Texas from 2010 to 2015? (2 pts.)

Assignment 3 (20 pts.)

1. Using 1990 to 2013 as the base period, create a 2040 total population projection for San Diego County using two complex extrapolation methods: 1) Linear model and 2) Exponential model. Use the recode value for time, include the CALIB term, and ignore the smearing correction in the Exponential model (sme) (6 pts.) (**Regression in Excel: <http://www.wikihow.com/Run-Regression-Analysis-in-Microsoft-Excel>**)
2. Using 1990 and 2013 as the base period, create a 2040 population projection for selected counties and the balance of the state in California using five trend extrapolation methods: 1) Linear (LINE); 2) Exponential (EXPO); 3) Shift-Share (SHIFT); 4) Share of Growth (SHARE); and Constant Share (CONSTANT). (4 pts.)
3. Create a 2040 population projection for California for LINE and EXPO using the bottom-up method. (1 pt.)
4. Interpret the regression slopes from the Linear and Exponential Models. (2 pts.)
5. What are the key assumptions that underlie the Linear and Exponential models? (2 pts.)
6. Why was it necessary to have an independent projection for California for the SHIFT, SHARE, and CONSTANT methods? (1 pt.)
7. Describe why the 2040 projections vary for the California counties. Note specific geographic areas in the answer where appropriate. (4 pts.)

Problem Sets (Cont.)

Assignment 4 (10 pts.)

1. Determined the supply of labor in Washington State in 2030 (3 pts.)
2. Determine the demand for labor in Washington State in 2030 using the Shift-Share method (3 pts.)
3. Determine the net employment related migration in Washington State between in 2030 (1 pt.)
4. Determine the net employment related migration in Washington State in 2030, assuming the U.S. adds on average 90,000 jobs per month between 2013 and 2030 (2 pts.)
5. What other components of migration would need to be forecast to determine the total net migration for Washington State in 2030? (1 pt.)

Assignment 5 (20 pts.)

1. Control the 2020 net migration forecast by age in California to an alternate total net migration forecast, which assumes slower growth due to migration (4 pts.)
2. Using the 2010 population forecasts based on an extrapolation approach and structural model for 39 subregional areas in San Diego County, calculate algebraic and absolute percentage errors for each subregional area. (3 pts.)
3. Calculate the following summary measures of error: MALPE, MAPE, MEDAPE, and PRE (for the MAPE and MALPE using the naïve forecast). (3 pts.)
4. What is the name of the controlling method used in Question 1 and why did you choose this method? (2 pts.)
5. Evaluate the precision, bias, shape of the error distribution, and utility of the forecasts based on extrapolation and structural model. Which method does the best and worst? (6 pts.)
6. What would be the MAPE value for a 25-year forecast based on the structural model for the subregional areas? (1 pt.)
7. What would be the MALPE value to a 25-year forecast based on the structural model for the subregional areas? (1 pt.)

Note: Inputs for Assignment 5 are on two spreadsheet tabs.

8. Articles/Internet Links on Electronic Reserve/Class Web Site

Mortality	Population Reference Bureau. 2006. The Future of Human Life Expectancy (On class website)
Fertility	<p>1. J. Blake. 1968. Are babies consumer durables?: A critique of the economic theory of reproductive motivation. <i>Population Studies</i>, 22: 5-25. (On class website)</p> <p>2. R. Easterlin. 1978. What will 1984 be like? Socioeconomic implications of recent twists in age structure. <i>Demography</i>, 15: 397-432. (On class website)</p> <p>3. W. Lutz. 2007. The Future of Human Reproduction: Will Birth Rates Recover or Continue to Fall? <i>Ageing Horizons</i>, 7:15-21 (On class website)</p>
Cohort-Component Method	A. Isserman. 1993. The right people, the right rates: Making population estimates and forecasts with an interregional cohort-component model. <i>Journal of the American Planning Association</i> , 59: 45-64. (On class website)

Research Paper: Topic, Questions, and Scoring

This research paper provides the “real world” opportunity to analyze and evaluate population projections and the impact that fertility, mortality, and migration assumptions can have on the future size of a population and its demographic make-up. The topic of the paper is *U.S. Demographics to the Year 2060 and the Outlook for Social Security*. I hope this will be a challenging and rewarding exercise. Good luck.

The paper should not be based only on data/information from a published source that has already analyzed. You must analyze and draw conclusions from original data, which are national population projections prepared by the U.S. Census Bureau. They are contained in an Excel spreadsheet (US_Pop2010-2060.xls) on the class Website. The **Projections Tab** contains population by selected age groups for the launch year 2010, four horizon years (2020-2060 in 10-year time increments), and four alternatives (low, middle, highest, and no immigration series) The **Assumptions Tab** shows the fertility, mortality and migration assumptions for each alternative. Articles on electronic reserve, the Internet, and the class website are available as resources.

The paper **must** address these questions (points are shown in parenthesis):

1. What two segments of the age distribution most influence the social security system? What measure, based solely on age groups, has been used to relate these segments? What are the strengths and weaknesses of this measure? What age groups are you using in this measure and why? (10 pts.)
2. Based on the selected measure, how does the age distribution vary under the different projection alternatives and why? Which alternatives are the most and least favorable to the social security system and why? (20 pts.)
3. Based on the selected measure, how does the age distribution vary within the 50-year forecast horizon? What are the reasons for these trends? (5 pts.)
4. Which one of the four projection alternatives is most likely to occur (i.e., as a forecast) and why (i.e., by **numerically specifying and justifying** the total fertility rate, life expectancy, and immigration assumptions in 2060)? You may also create assumptions by combining elements from the alternate scenarios or specifying and justifying assumption values not in any scenario. (15 pts.)
5. Playing the role as president, what strategies would you implement to address the social security system problem? Why would these be selected over the other strategies being considered? (10 pts.)
6. Overall Quality: organization; including an Introduction and Conclusion; spelling and grammar; professional looking graphs/tables; proper citations and bibliography; well-articulated, concise, supported, and documented arguments (10 pts.)

Research Paper: Guidelines

DO

- Include a cover page
- A hands-on analysis of population projections based on the U.S. projection data provided.
- Include an Introduction to provide background information and motivation for the topic (answer the “why we should care” question) and Conclusion summarizing the implications of your findings.
- Proofread the paper carefully. Make sure the paper is well-organized (do an outline before writing word one), has proper grammar and spelling, and effectively communicates your ideas.
- Think about the reader when making tables and graphs. Are they easy to read? Is there a better, cleaner way to display the same information? Does the information help support or clarify the analysis and conclusions? Learning to do this well is an invaluable skill.
- Label and number tables and graphs properly (see SANDAG publication for examples); Include a proper source at the bottom, telling where the data came from; All tables and figures should be cited in the text (e.g. As shown in Figure 1). Don’t split tables and figures across pages.
- Cite all data and references completely (for Websites, this means the complete URL, the date, the organization publishing it). Consult a style manual for the proper way to cite a source.
- Give the analysis the “common-sense” test. It is very possible to make computing mistakes that yield improbable results.
- Have a friend from another class read the paper.

DON’T

- Exceed more than five double-spaced typewritten pages, excluding references, figures, and tables.
- Rely exclusively on data analyzed by others. (Information can be cited from external sources, but the paper must include the analysis of the U.S. projection data).
- Include extraneous information (verbiage, tables, and charts) that are not helpful in answering the questions, defending a position, or supporting a claim.
- Wait until the last minute to start your paper.
- Plagiarize. If the ideas, data, and findings, etc. come from other sources they must be cited and given appropriate credit.

BEFORE CREATING THE FINAL PAPER ASK YOURSELF THESE QUESTIONS

- Is it clear from the beginning what this paper is about?
- Does each paragraph advance the subject?
- Do the important ideas stand out clearly?
- Are more details, examples, anecdotes needed?
- Is the information sufficiently clear?
- Are their sweeping statements that need to be supported?
- Do any technical terms need explanation?
- Is there needless repetition?
- Is tone consistent?
- Are any of the sentences too involved to follow with ease?

Professor Tayman Office Location - Economics Annex #103
