## **COURSE DESCRIPTION**

In this class you will be introduced to the way that economists view energy choices by reading peer-reviewed journal articles written by economists actively working on energy issues. Each week we will address specific questions about energy supplies, energy demand, and the structure of energy markets by examining how different economists have looked at these questions, and identify any important aspects of these questions that have not yet been answered.

## PREREQUISITES

Econ 1A-B or Econ 2 or Econ 100A and Math 10C or Math 20C.

## **COURSE READINGS**

Required readings (listed below) have been provided on the course website (<u>http://webct.ucsd.edu</u>). To provide an extra incentive for students to read the listed articles before lecture, regular reading quizzes will be given in class during the quarter.

# STATEMENT OF ACADEMIC INTEGRITY

Students are expected to do their own work, as outlined in the UCSD policy on Academic Integrity published in the UCSD General Catalog. Cheating will not be tolerated, and any student who engages in suspicious conduct will be subjected to the disciplinary process. Students found guilty of academic misconduct will receive a failing grade in the entire course and may be suspended from UCSD.

## **QUIZZES AND EXAMINATIONS**

Six quizzes will be given in this class

- Quizzes will be given randomly at the start of class time
- Top five quiz scores will be used to determine your quiz grade (lowest quiz score is dropped).

Two midterm exam and one final exam will be given in this section.

- The midterm exams will be given in class: Thursday January 28th & Thursday February 23th.
- The final exam will be given on Thursday, March 18<sup>th</sup>, from 7:00-10:00 p.m.

All quizzes and exams must be taken at the scheduled time and place. Students who arrive late will not receive extra time to complete their quiz/exam. Once a student completes the quiz/exam and hands it in for grading, no other student will be permitted to start the quiz/exam.

## EXAMINATIONS

There will be three examinations all given equal weight. None of the exams are explicitly cumulative but it is important to note that the course builds on topics learned earlier so conceptual material learned earlier should not be forgotten whereas specific factual material from earlier parts of the course will not be asked on subsequent exams. Bring calculators to exams. Blue books are **NOT** needed.

#### SHORT REPORT

You will need to write a two to three page (max) single spaced report addressed to a some policymaker (your choice; examples include but not limited to Secretary of Energy/EPA, Member of Congress, Head of Energy Company/Environmental Group, Equivalent of Secretary of Energy/EPA in foreign country, Head of World Bank). Topic: pick any policy issue related to an emerging energy economics topic that you will be important in the future to policymakers. The January 7<sup>th</sup> readings may be a good starting point to look for a topic as are the websites listed under Energy Links in the class WebCT site. Turn in a hard copy. **Email NOT ACCEPTED. OUIZZES** 

Short multiple choice questions on assigned reading for that day. Basic concepts/facts emphasized with no computational questions. A template that may be potentially helping in thinking about the key points of an article is provided on the course website under the January 5<sup>th</sup> lecture.

#### MISSED QUIZZES AND EXAMINATIONS

(1) No make-up quizzes/exams will be given. Missed quizzes for any reason will receive a grade of zero.

(2) Students who miss a midterm exam without an acceptable reason will receive a grade of zero (0) for that

exam. Students who miss the midterm with an acceptable reason will have the weight of the other exam increased accordingly. You must take the final exam to receive a grade in this course.

(3) Reasons for missed midterm exams must be **pre-approved** by the instructor (except when this is not possible in an emergency situation). Students who make initial contact after the exam will have to document why they could not make contact prior to the exam. In addition, any student who misses an exam due to physical illness will be required to provide documentation from a health care professional indicating why the student was physically unable to take the exam. All documentation and an additional signed written statement explaining the relevant circumstances of the absence must be provided to the instructor within two working days of the student's return to campus. Failure to comply with any of the above in the specified manner will result in a grade of zero (0) for the exam.

## **PROBLEM SETS**

There will be three problems sets. Each emphasizes the types of quantitative questions needed for the next exam. Students encouraged to work in groups but each must turn in a separate fully worked problem set. Hard copy of problem set turned in class required. **Email submissions will not be accepted.** 

#### READINGS

Students are responsible for all class readings unless clearly noted as optional. Optional readings may be covered in class but you are only responsible for the material gone over in class. Some additional optional readings not on this syllabus are provided on the course website in case you want to look at particular issues in more depth. **GRADING** 

Grades will be curved with final letter grade determined by distribution of class raw numerical scores. Your raw numerical score will be determined as follows:

Quizzes	= 5% (5 quizzes @ 1 percent each)
Short Report	= 5%
Problem Sets	= 15% (3 problem sets @ 5 percent each)
Midterm Exam 1	= 25%
Midterm Exam 1	= 25%
Final Exam	= 25%
Total Raw Score	= 100%

# DATE: TOPIC

January 5: Review of Basic Economic Concepts/Energy Facts (Kevin Novan) January 7: Overview of Course/Challenge of Climate Change

January 12: Role of Energy in U.S./World Economies: Micro & Macro Perspectives January 14: Theory of Exhaustible Resources Short Report Due January 14<sup>th</sup>

January 19: Theory of Exhaustible Resources, continued

January 21: OPEC and Energy Cartels; Search for New Supplies/Hubbert's Curve

January 26: International Trade and Security Issues Related to Energy **Problem Set I Due January 26<sup>th</sup>** January 28: **Midterm Exam 1** 

February 2: Electricity: Generation, Load Profiles, Distribution and Regulation

February 4: Traditional Baseload Power Sources: Coal and Nuclear

February 9: The Switch to Natural Gas [CCGT-Combined Cycle Gas Turbines] **Problem Set II Due February 9<sup>th</sup>** 

February 11: Alternative sources energy (Wind, Geothermal, Large Scale Solar) & Transmission Issues

February 16: Automobiles I: Fuel Consumption and Congestion Related Externalities February 18: Automobiles II: Regulation and alternatives including public transit/biofuels and hydrogen

February 23: **Midterm Exam** February 25: End-User Programs: Home/Commercial Energy Conservation & Solar Installations

March 2: Local/Regional Environmental Externalities Related to Burning Fossil Fuels March 4: Global Climate Change: The Underlying Science and Technical Solutions

March 9: Global Climate Change: The Economic Perspective **Problem Set III Due March 9<sup>th</sup>** 

March 11: Global Climate Change International, National, State & Local Action

March 18: Final Exam

## DATE: READINGS

January 5: Review of Basic Economic Concepts/Energy Facts (Kevin Novan)

Peter, G. (2009), "Energy Measurement Units", Handout for UCSD Econ 132

Optional: British Petroleum (2009), "Statistical Review of World Energy". This document & U.S. Energy Information Agency site <u>http://www.eia.doe.gov/</u> are good sources for energy information.

January 7: Overview of Course/Challenge of Climate Change

*Economist Magazine* (2009), "A Special Report on Climate and the Carbon Economy," Dec. 5. and *Economist Magazine* (2008), "A Special Report on the Future of Energy," June 21.

Jacobson, M.Z. and M. Delucchi (2009), "A Path to Sustainable Energy by 2030," *Scientific American*, November: 58-65. and Mirsky, S. (2008), "The Need to Lead Clean Tech: A Conversation with Thomas Fiedman," *Scientific American Earth* 3.0, 18: 42-45.

January 12: Role of Energy in U.S./World Economies: Micro & Macro Perspectives

Fouquet, R. and P.J.G. Pearson (1998), "A Thousand Years of Energy Use in the United Kingdom," *The Energy Journal*, 19: 1-41.

Hamilton, J.D. (2008), "Oil and the Macroeconomy," in New Palgrave Dictionary of Economics.

*Optional:* Hamilton, J.D. (2009), "Causes and Consequences of the Oil Shock of 2007-2008," *Brookings Papers on Economic Activity*, 1: 215-259.

January 14 and January 19: Theory of Exhaustible Resources

Hartwick, J. and N. Olewiler (1998), "Non-Renewable Resource Use: The Theory of Depletion," [Chapter 8] and "Nonrewable Resource Use: Departures from the Competitive Case and from Fixed Stock Size," [Chapter 9] from The Economics of Natural Resource Use, 2<sup>nd</sup> ed. (Addison-Wesley).

January 21: OPEC and Energy Cartels; Search for New Supplies Including Hubbert's Curve

Alhajji, A.F. and D. Huettner (2000), "OPEC and World Crude Oil Markets from 1973 to 1994: Cartel, Oligopoly, or Competitive?," *Energy Journal*, 21: 31-60. & Mason, C. and S. Polasky (2005), "What Motivates Membership in Non-Renewable Resource Cartels: The Case of OPEC," *Resource and Energy Economics*, 27: 321-342.

Econ 132 Handouts: "Hubbert Curve Theory", "Estimates of the U.S. Hubbert Curve", "U.S. Geological Service "World Oil Resource Estimates"

*Optional:* Atkins, F.J. and A.J. MacFadyen (2008), "A Resource Whose Time Has Come? The Alberta Oil Sands as an Economic Resource," *The Energy Journal*, 29: 77-98.

January 26: International Trade and Security Issues Related to Energy

Nordhaus, W. (2009), "The Economics of an Integrated World Oil Market," keynote address, International Energy Workshop, Venice, July. And, U.S. Energy Information Agency, "2006 Estimates of Oil Exports, Consumption and Net Imports".

Delucchi, M. and J. Murphy (2008), "U.S. Military Expenditures to Protect the Use of Persian Gulf Oil for Motor Vehicles," *Energy Policy*, 36: 2253-2264.

February 2: Electricity: Generation, Load Profiles, Distribution and Regulation

Shaten, R. (2008), "Capacity and Demand," Energy & Resource Economics Workbook, (Internal Energy). and Econ 132 Handout: G. Peters "The Cournot Model".

Viscusi, W.K., J.E. Harrington Jr., and J.M. Vernon (2005), "Natural Monopoly Regulation and Electric Power," [Chapter 5] MIT Press: *Economics of Regulation and Antitrust*, 4<sup>th</sup> Edition.

Brennan, T., K. Palmer, S. Martinez (2002), "Implementing Electricity Restructuring, ERE 22: 99-132.

Borenstein, S. (2002), "The Trouble with Electricity Markets: Understanding California's Restructuring Disaster," *J. of Economic Perspectives* 16: 191-211.

February 4: Traditional Baseload Power Sources: Coal and Nuclear

David G. Victor and Richard Morse, 2009, "Living with Coal: Climate Policy's Most Inconvenient Truth," *Boston Review*, September/October, pp. 7-14.

Joskow, P.L. and Parsons (2009), "The Economic Future of Nuclear Power," *Daedalus*, 138: 45-59. and Wald, M. (2008), "Can Nuclear Power Compete," *Scientific American Earth 3.0*, 18: 26-33.

February 9: The Switch to Natural Gas [CCGT-combined cycle gas turbines]

International Energy Agency (2009), "Gas Fired Power," Tech Brief E02. & Doyle, R. (2004), "Energy Geopolitics: World Power Could Shift If Natural Gas Supplants Oil," *Scientific American*, October: 36.

February 11: Alternative sources energy (Wind, Geothermal, Wave, Large Scale Solar) & Transmission Issues

Charles, D. (2009), "Renewables Test IQ of Grid," *Science*, 324: 172-175. and Wald (2009), "The Power of Renewables," *Scientific American*, March: 56-60.

U.S. Department of Energy (2002), *National Transmission Grid Study* (U.S. DOE). Note Executive Summary, Sections 1 and 2 are required reading. Other parts of report are *optional* reading.

February 16 & February 18: Automobiles

Parry, I., M. Walls, and W. Harrington (2007), "Automobile Externalities and Policies," *Journal of Economic Literature*, 45: 373-399. and Parry, I. and K. Small (2009), "Should Urban Transit Subsidies Be Reduced," *American Economic Review*, 99: 700-724. "Future of Cars," Scientific American (2009).

*Optional:* Bento, A. L. Goulder, E. Henry, M. Jacobsen, and R. van Haefen (2005), Distributional and Efficiency Impacts of Gasoline Taxes," *American Economic Review*, 95: 282-287.

February 25: End-User Programs: Home/Commercial Energy Conservation & Solar Installations

Gillingham, K., R. Newell and K. Palmer (2006), "Energy Efficiency Policies: A Retrospective Examination," *Annual Review of Environmental and Resource Economics*, 31: 161-192.

Borenstein, S. (2008), "The Market Value and Cost of Solar Photovoltaic Electric Production," CSEM paper 176, UC, Berkeley. & D. Brooks (2008), "MisLEEDING," *Scientific American Earth* 3.0, 54-58.

March 2: Environmental Externalities Related to Fossil Fuels

Dewees, D. (2008), "Pollution and the Price of Power," *The Energy Journal*, 29: 81-100. and Carlin, J. "Environmental Externalities in Electric Power Markets," U.S. Energy Information Agency.

Carson, R. (2009), "Environmental Kuznets Curve," Review of Environmental Economics and Policy. and Webber, M. (2008), "Catch 22: Water vs. Energy," *Scientific American 3.0*, 18: 34-41.

*Optional*: Komey and Krause (1997), "Introduction to Environmental Externalities," and Carson, R., et al. (2003), "Contingent Valuation and Lost Passive Use: Damages from the Exxon Valdez Oil Spill," *Environmental and Resource Economics*, 25: 257-283.

March 5: Global Climate Change: Underlying Science and Technical Solutions

Le Treut, H. and R. Somerville (2007), "Historical Overview of Climate Change Science," in *Climate Change 2007: The Physical Basis*, Intergovernmental Panel on Climate Change (IPCC).

Pacala, S. and R. Socolow (2004), "Stabalization Wedges: Solving the Climate Problem for the Next 50 Years with Current Technologies," *Science*, 305: 968-972.
