

# ECONOMICS 172A: Introduction to Operations Research (Part A)

Winter 2020

Lectures: MWF 1:00 – 1:50 pm in CENTR 113  
Discussions: Thursdays 7:00-7:50 pm in HSS 1330

Prof: Herb Newhouse (hnewhouse@ucsd.edu)

Office: Econ 108

TAs: Evgenii Baranov (evbarano@ucsd.edu) and undergraduate Elle Boodsakorn (jboodsak@ucsd.edu)

Instructor and TA office hours will be posted as an announcement on TritonEd.

Course webpage: <https://tritoned.ucsd.edu/>

Economics 172A is the first course in the two-quarter Operations Research sequence. It covers linear and integer programming. Linear and integer programs are types of mathematical optimization problems. The class will introduce you to the problem, teach you how to formulate economic problems as linear programming problems, teach you how to solve these problems, and teach you how to interpret the solutions to these problems.

## Prerequisites:

ECON 100A; and ECON 120A or ECE 109 or Math 180A or Math 183 or Math 186; and Math 20F. Note that credit is not allowed for both ECON 172A and MATH 171A.

## Lectures and Discussion Sessions:

You are responsible for all the material in the lectures and problem sets. Partial notes will be available on the class webpage before each lecture. I recommend that you print these out before hand and fill in the missing information as we go. I'll do my best to avoid typos but you're responsible for the correct material. I want you to understand the material instead of simply memorizing it. The audio and material projected on the screen will supposedly be podcasted. If you miss a lecture, watch the podcast or borrow someone's notes. Discussion Sessions are optional but recommended.

## Grades:

Your grade will be determined on the basis of a Project (10%), two Midterm Exams (20% each) and the Final Exam (50%). Alternatively the project will count for 10%; your lower midterm will count for 10%; your higher midterm will count for 20% and your final will count for 60%. Alternatively, still, each midterm will count 20% and the final will count for 60%. The method of weighting that results in the highest grade will automatically be chosen at the end of the quarter.

## Exams:

Midterm 1 will be held in class on Wednesday, January 29th. Midterm 2 will be held in class on Monday, February 24th. The final exam will be held on Friday, March 20th from 11:30am – 2:30pm. If you know in advance that you cannot make an exam, please let me know as soon as possible.

You must get the instructor's permission (in advance if possible) if you miss a midterm. If you miss a midterm for an approved reason the weight for that exam will be placed on the final. If you miss the final exam for a documented, university approved reason (ie., illness, official university trip), you will most likely receive an Incomplete for the class and will need to make-up the exam during the following quarter. If you miss the final exam for another reason (ie., oversleep) you will receive a zero for the exam. No one will be allowed to start an exam after the first person leaves it.

You are only permitted to use pens and pencils, a straight edge and a **single** note sheet during each exam. Calculators are **not** permitted. The note sheet can be any physical size up to 8.5" by 5.5" for the midterms and up to 8.5" by 11" for the final. It may **only** have handwritten notes on both sides. Typed or mechanically reproduced notes are not permitted. Do **not** attach anything to your note sheet. If your note sheet does not adhere to any of these conditions, it will be immediately confiscated during the exam. Additionally, a report may be filed with the Academic Integrity Office.

If seats are assigned for exams, anyone not sitting in his or her assigned seat will lose points on that exam. If there is a problem with your assigned seat, please let us know so we can reassign you.

#### Project:

You must complete a computer project where you will be asked to solve and analyze a linear program. The project may be completed by groups of one to four people. You may consult with people in other groups but your group must solve the project and write up the analysis on your own. I will report groups whose analyses look overly similar to the Academic Integrity Office.

The due date for the project is 7:00 pm on Tuesday, February 18th. Projects turned in between 7:00 pm and 9:00 pm on that day will be penalized 20%. No project will be accepted after that time.

#### Academic dishonesty:

I take academic dishonesty seriously. Any student found guilty of academic dishonesty will almost certainly earn a failing grade for the course. In addition to this sanction, the Council of Deans of Student Affairs will also impose a disciplinary penalty. For a review of UCSD policy, please see <http://www-senate.ucsd.edu/manual/appendices/app2.htm>.

#### Regrade requests:

Regrade requests may be submitted via Gradescope during the weeklong regrade period. The regrade period will probably begin a day or two after the exam results are made available to the class. Please do not contact the instructor or any of the TAs regarding the grading of an exam or the grading for the course before the regrade period begins. If your TA agrees with your request, your score for that question will be corrected. If your TA disagrees with your request, you will lose 1 point for each midterm question and 2 points for each final exam question.

#### Text:

Introduction to Operations Research, 10th Edition, Hillier and Lieberman, McGraw-Hill. I will give references for the 10th edition but other recent editions should also be fine. The material for this course is fairly standard; other Operations Research texts are also likely to be helpful.

#### Problem Sets:

Problem sets will be available online. We will go over these questions in office hours and in the discussion sections. Your best practice for the exams is to try these questions yourself first.

#### Preliminary Course Outline:

1. Introduction/Problem Formulation (Ch 1 – 3)
2. Duality Theory and Sensitivity Analysis (Ch 6)
3. Integer Programming (Ch 11)
4. The Transportation and Assignment Problems (Ch 8)
5. Network Optimization Models (Ch 9)

(A more detailed list of the readings will be given with each set of notes and posted on TritonEd.)
